

t = 0, $L = 28.87 \text{ \AA}$

jax-md 200 ps, $L = 29.19 \text{ \AA}$

PyCHARMM 200 ps, $L = 29.79 \text{ \AA}$

CHARMM CPT (AR1:500)

- 20 × 10 ps DynamicsScript segments
- MMML_CPT_DYNAMICS_CHUNK_NSTEP=5000
(no 250-step micro-chunks / reseed)
- mild expansion only ($\rho \approx 1.28$ vs 1.288)
– far better than AR1:108 gas-like
collapse; residual barostat/P noise.

AR1:500 · 90 K · $P_{\text{sat}} = 1.335 \text{ bar}$ · mm-switch 7+3.39 Å
